

**Worksheet: Lists of “In Common With” or “Shared Matches”**

Groups of DNA Relatives that are DNA matches of each other are likely descendants of a common family line. Sorting DNA Relatives into these family groups can be helpful in organizing match lists. Use the table below to list the top 10 “shared” or “in common with” matches of four DNA Relatives in a common family line. Each of these DNA Relatives should appear in the “shared” or “in common with” matches of each other.

DNA Relative	List: “Shared Matches” or “In Common With”									

**Worksheet: Clustering DNA Relatives**

Groups of DNA Relatives that are DNA matches of each other are likely descendants of a common family line. Sorting DNA Relatives into these family groups can be helpful in organizing match lists. Use the table below to identify the “shared” or “in common with” matches of a set of DNA Relatives that represent a common family line.

	<b>Matching: “Shared Matches” or “In Common With”</b>									
<b>DNA Relative</b>										

Draw a family tree representing the relationships among these DNA Relatives.
