Compatibility View in Internet Explorer

Internet Explorer has a Compatibility View feature that can improve viewing websites designed for earlier versions of IE. However, since MAUI is designed to the current Internet Explorer 9 standards, having the Compatibility View on can have the opposite effect; causing screens to display incorrectly (e.g. Proof Copy).

There are several different ways to change the Compatibility view in Internet Explorer:

- Compatibility View (from Tools drop down list)
- Compatibility View settings (from Tools drop down list)
- F12 developer tools (from Tools drop down list)
- Compatibility View icon (in the Address bar)

Example 1 – Compatibility View (from the Tools drop down list)

A. Click Tools drop down list (either in the Menu bar or in the Command bar).
   - Note: The Proof Copy screen is used in this example, however, you can change these settings on any screen of Internet Explorer.
Example 1 – Compatibility View (from the Tools drop down list)

B. If there is a check mark (✓) in front of Compatibility View, uncheck it.

Example 1 – Compatibility View (from the Tools drop down list)

C. The screen will now display correctly; see below.
Example 2 – Compatibility View settings (from Tools drop down list)

A. Click **Tools** drop down list (either in the Menu bar or in the Command bar).
   - Note: The Proof Copy screen is used in this example, however, you can change these settings on any screen of Internet Explorer.

Example 2 – Compatibility View settings (from Tools drop down list)

B. Click **Compatibility View settings**.
Example 2 – Compatibility View settings (from Tools drop down list)

C. You will receive the following pop-up window. If there is a check mark (✓) in front of Display all websites in Compatibility View, uncheck it then click Close.

Example 2 – Compatibility View settings (from Tools drop down list)

D. The screen will now display correctly; see below.
Example 3 – F12 developer tools (from Tools drop down list)

A. Click Tools drop down list (either in the Menu bar or in the Command bar).
   - Note: The Proof Copy screen is used in this example, however, you can change these settings on any screen of Internet Explorer.

Example 3 – F12 developer tools (from Tools drop down list)

B. Click F12 developer tools.
Example 3 – F12 developer tools (from Tools drop down list)

C. You will receive the following pop-up window. Click Browser Mode.

Example 3 – F12 developer tools (from Tools drop down list)

D. You will receive the following pop-up window. If there is a check mark (✓) in front of Internet Explorer 9 Compatibility View, check Internet Explorer 9.

E. The screen will now display correctly; see below.
Example 4 – Compatibility View icon (in the Address bar)

A. Click Compatibility View icon (in the Address bar).
   - Note: The Proof Copy screen is used in this example, however, you can change these settings on any screen of Internet Explorer.

Example 4 – Compatibility View icon (in the Address bar)

B. The screen will now display correctly; see below.
